DETAILED ACTION

1. Claims 1-22 are pending in the application, claims 1-20 are withdrawn from consideration.
2. Amendments to claims, filed on November 24, 2003, have been entered in the above-identified application.

Election/Restrictions

3. Applicant's election with traverse of Group III, claims 21 and 22, in the reply filed on December 15, 2005 and July 15, 2005 is acknowledged. The traversal is on the ground(s) that there would not be a serious burden on the Examiner to examine all the pending claims. This is not found persuasive because of their recognized divergent subject matter and the search required for Group I is not required for Group II or Group III or vice versa.

The requirement is still deemed proper and is therefore made FINAL.

4. Claims 1-20 withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on December 15, 2005 and July 15, 2005.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1772

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 21 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tsuchida et al. (U.S. Patent No. 6,835,241) in view of Yeager et al. (U.S. Patent No. 6,352,782).

Tsuchida discloses a laminate sheet comprising a polyphenylene ether sheet (*col. 6, line 20*) and a copper foil (*title*). The foil has a surface roughness of 2 μm or less (*col. 3, lines 13-15*) and the surface thereof facing the sheet with zinc or a zinc alloy (*col. 6, lines 3-5*) and at the same time coupled with a silane coupling agent having a vinyl group (*col. 5, lines 14-16*).

Tsuchida fails to disclose the claims polyphenylene ether composition.

Yeager teaches the claimed polyphenylene ether composition (*summary of the invention*).

It would have been obvious to one of ordinary skill in the art at the time of the invention to use Yeager's polyphenylene composition as Tsuchida's composition in order to insulation properties and make the composition fire restraint (*Yeager, abstract*).

The limitation "piling a prepreg" is a method limitation and does not determine the patentability of the product, unless the process produces unexpected results. The method of forming the product is not germane to the issue of patentability of the product itself, unless Applicant presents evidence from which the Examiner could reasonably conclude that the claimed product differs in kind from those of the prior art. MPEP 2113.
